Joomla Templates does not apply
Posted by shag3doo - 2009/05/20 04:22

_____

Hi,

I just bought this component and just finished configuring 1 site. I ran into some problems when i installed a new theme.

Here are the scenarios i've tried
1. Installed the template on the slave site
- Template appears on the slave site but if i make it the default template it comes back to JA_Purity template.
- If i use beez or other default template, it changes

2. Installed the template on the master site
- Template appears on the slave site but only JA_purity still appears
- Tried to apply the template on the master site and it did reflect

am i missing something?

_____

I will try to reproduce the scenario you have described
