Pre Buy Question. Urgent

Posted by parth - 2008/12/22 11:24

Hello,

We are considering going in for your Multisites extension. But would like to get some things cleared up before we can do that.

Background :

We are currently doing a project that involves extensive use of Community Builder (1.2 RC2) & Virtuemart (Latest Version).

CB uses Custom Plugins (No Hacks)
Virtuemart has been modified extensively.

We need the site to be accessed from 2 different urls say dummy1.net & dummy2.net

These sites will have theit own templates & content but share Virtuemart & CB (User Data) & JUGA for access level mgmt

We are hoping your extension will allow us to share all user related tables (including Joomla User tables, CB tables) , Virtuemart tables & Session tables.

We are hoping to do this using the following setup

dummy1.net uses mainly uses tables with prefix dummy1_
dummy2.net uses mainly uses tables with prefix dummy2_

AND they both share tables with prefix dummy_
These tables will be core joomla access level tables, jos_users, JUGA tables, CB tables & VM Tables.

Do let us know if this is possible.

Regards

==========

Joomla Multi Sites only share joomla the files and folder on the disk.

JMS does NOT share the database content.
So the articles, news, forum, users, ... or whatever that is stored in the DB is NOT shared.

See also FAQ
http://www.jms2win.com/faq#sec-73
http://www.jms2win.com/faq#sec-12

http://www.jms2win.com/faq#sec-72

Yes you can have
dummy1.net uses mainly uses tables with prefix dummy1_
dummy2.net uses mainly uses tables with prefix dummy2_

but they will NOT share a table dummy_

Each website must be considered as totally independent.

_____

I also buy these compo in thinking to share also my user for

Single login....

If I'm right....it is not possible? Right?

that's a little bad because these was the reason I bought....

Greets...

I USE 1.1.x:dry:
