If you are reading this, you are probably looking for answers. For those who know, you already know. For the beginners and intermediate learners you have come to the right place. My skill level is beginner to intermediate.

1) If you have a vision of a multi site setup for joomla. JMS multisite is the best product on market to date for sure. You can stop looking!

2) If you are on a tight budget, confused, lost and need guidance. I can tell you, every support hour spent with Edwin will save you thousands later. Do not be afraid to purchase time. He is a master coder and will save you time and money. Guaranteed!
Remember: You get what you pay for..

3) Take notes, screenshots, pay attention, ask for clarity until you understand before moving forward. Listen very close to everything Edwin teaches you. Very valuable info.... I have had to deal with a lot of different support situations and out of 1-10 JMS Multi sites receives a 10+++++. Skill level exceeds all so far.

4) Be patient, stay focused and do not give up. If you have found yourself here, you have arrived at the right place. Do not hesitate! Go for it!

(this product is not necessarily for beginning users, but, can be learned easily. Do not let this discourage you.)

It is a very useful and powerful tool. I can not say enough about it.

Awesome! Awesome! Awesome!
