LDAP server

Posted by mdadvice - 2012/10/16 21:12

After installing a slave site from a master site, I get the following error when I want to login into my slave site (administrator - back-end): can not make a connection to the LDAP-server.
Can anyone help me ?

Thnx

---

problem is solved - I filled just a login name in place of an email-adress, when making a slave site

Glad to see that you found the solution yourself.
