slave site and Yootheme widgetkit

Posted by mdadvice - 2012/11/11 11:38

I've installed a slavesite, but on this site Widgetkit shows "code" and not the interface (see image in attachment) - and it don't save anything. I've installed already the JMS patches for yootheme (widgetkit) (60,-€!)
Joomla 2.5.7 and widgetkit 1.3.1 (and it was not working with the previous version)

Can somebdoy help me further

Thnx
