# Joomla and JMS site backup

Edwin,

What do you recommend for backing up a Joomla site, slave sites, and all site data? Is there a 3rd party application that you recommend? I had an experience with a Joomla site in the past where the site was hacked and I lost everything except some pieces of the template because the site was not backed up.

You can find in our FAQ a description of the procedure to perform a backup and also a shell script in our free download.
