# Creating Slave Sites Programatically

Posted by saltmedia - 2013/07/23 02:09

---

Hello, we've been using JMS multisites for over a year now and it's been working GREAT!
However, we want to automate the process for creating slave sites.

Is it possible to provision new sites via a PHP script instead of using the JMS Multisites admin GUI?

Thanks!

Not really.

If you want to create a large number of website, we can do that with our billable support.
We can create approximativelly 400 websites in 8 hours.
For that, we will ask to provide an excel file with a very brief description of some field. We will provide you our format if you need that.
It also use the JMS template rules to create and setup the files.

We have created a specific internal extension that is not a product and for which we need to update the source code for each environment.
It helps us creating websites faster.

This is something that we do from time to time for SEO companies that want to create a large number of websites targetted on specific keywords.

Our billable support is available here
https://www.jms2win.com/en/joomla-multisite?page=shop.product_details&flypage=flypage_multisites.tpl&product_id=35&category_id=1
