How to display multiple articles from each slave

Posted by twgcommunications - 2009/10/02 20:00

Hi I am trying to place one blog on the frontpage of the master site using the article sharing component. However, I cannot find an option to add multiple slave sites for the frontpage layout.

Is there a way I can edit the php files and get this to work?

Thank you.

I don't understand your question.
What do you mean by "I cannot find an option to add multiple slave sites for the frontpage layout."

Do you want to display the list of slave sites defined in JMS into into the body of an articles that you have in your frontpage ?

Such module to include the list of slave sites defined in JMS into a content of an article does not exists.

Can you be more explict and explain in detail what you want.

Okay I'll try and clarify...

I have multiple slave sites, and I wish to publish their frontpage articles all in one frontpage on the master site.

Is there a way that I can edit the php to do this? Or can you suggest a workaround module that can accomplish this result?

Thanks so much!

_____

I better understand that you would like to have a kind of blog that merge all the frontpage articles coming from all the slaves sites.

This component does not exists and we don't know if somebody else would have developed an equivalent component.

If you want that we develop such specific component, this is possible with our billable support that you can order on
http://www.jms2win.com/download?page=shop.product_details&flypage=flypage.tpl&product_id=35&category_id=1
This is not something that we can do in one hour. This may require several days (perhaps 2 days).
