shared user access

Posted by wcochrane - 2009/10/27 00:16

Hello,
I'd like to work with a shared user model because one of the key components I need users one user database.
How can I lock down a site for a user? For example, I have slave_1a and slave_1b sites. I want Joe to admin slave_1a, but not be able to admin slave_1b.

Thoughts?

Today, there is no possibilty to partially share the users.
With JMS, you can only share ALL the users or none of them.
But you can not partially share the user (or limit few of them to a specific slave site).
