See the list of current extension defined in the JMS tools.
http://www.jms2win.com/component/content/article/135

Ads Mananger is present.

When an extension is not present, this simply mean that you can not use the JMS tool present in the master website to isntall an extension into a slave site.
You have to login in the slave site and re-install the extension.

If you want that we review extension that is not yet present in JMS tools, send us the extension in attachement of an email.
