joomSEF configuration file

Posted by rico - 2010/03/24 07:17

Hi there,

any Idea how i can achieve to have a configuration file for each slave site in JoomSEF? The problem is that JoomSEF saves the configuration under administrator/components/com_sef/configuration.php which is "shared".

Please advise.

Cheers,
Rico

I see this file and need some times to see where it is used.
Create a patch may take several days or weeks.

In this configuration file, it seems this is relative to "global" configuration.
What do you want to have specific that require to have specific "configuration.php" file

Thanks for your response.

In my case the sitemap setting($sitemap_filename) has to be different for each slave site.

Cheers,
Rico

Which version are you using.
In my configuration.php file, I don't have this $sitemap_filename

Where do you setup this field.
I have not find it in the "artio joomSEF configuration".

The version I am using is 3.3.5
