Virtuemart module on all slave sites? Posted by bdovpro - 2010/04/08 22:10
When I click new module I see all the virtumart modules even though i never installed them on my fresh slave site, is that suppose to happen or is there a database conflict or something?

think (but do not remember) that this is normal. don't have the possibility to recheck it now. We are in Joomla Dat Mallorca and will not be available until the 13th april.
