2 Adsmanager on 2 sites sharing 1 CB - Possible?

Posted by mamasboy - 2010/04/14 14:29

Hi,

This is a wonderful extension!!

I like to know if this is possible...

Main site has CB and Adsmanager (say for Sell advertisements)

Slave site has shared CB users from main site and Adsmanager (say for Buy advertisements)

So the shared users may advertise in Sell or Buy sites (or both).

Adsmanager has a CB plugin whereby it can appear in a CB tab.

Now, is it possible to have 2 Adsmanager tabs on the profile i.e. one for Sell ads and another for Buy ads?

Or another way is to show Sell ads on the CB tab when user is on Sell site, and to show Buy ads on the CB tab when user is on Buy site. However, if this is possible, do we use the special Menu extension?

Please advise.

I don't know and just suggest you to try do it.
All I can tell you is that CB and AdsManager are 2 extensions defined in JMS Multisites.
Therefore you can use them.

I can just tell you that you can share both of them.

Hi edwin,

Maybe let me rephrase my question slightly differently.

Now when you say CB can be shared between main and slave. Does that mean only share the

extension? or also the user profiles as well? Can I choose whether to share the user profiles or not to share?

Secondly, can I install Adsmanager on the main site with one set of ads AND install Adsmanager on the slave site with a different set of ads. Can I NOT share the ads data?

Please advise.
