before buy question

Posted by Freckled - 2010/04/27 14:44

Hi Everyone

I have following Situation I would like to solve with this tool you provide pleace tell me iv this would work

I have an existing Homepage with Virtue mart installed. But over the many changes and updates several function don’t work any more, or have bugs.

What I want to do is to create a new Homepage and rebuild the Main Homepage and use only the main data’s as contetens and Gallery and so on!

Ten I like to crate an other homepage with basically the same design but have only the Virtuemart installed with only the minimum on Modules.

In this time all user data’s and Virtuemart should be shared

After this two steps I wand to delete the existing Page

And on the end to have the mission complete I like to open 2 new homepages with the same contens as development sites but have only one way synchronization.

So to the end is it possible with your application to do that is not what dose not work and how far it works. And I like to know witch modules I have to purchase

==========

With Jms Multisites, you can effectivelly share the VirtueMart extensions and therefore create another websites that will have the same eshop.

In this new wesbite, you will have the same users and will be able to have its own template (look) and create its own articles, menu, ...

So you can have two differents websites with different homepage that will share the same VirtueMart catalog and product.

With Jms multisites, we do NOT syncrhonize anything.
The sharing means that the data are physically present only once.
Therefore, if you physiscally share the VirtueMart, the new websites will be linked to the current one. If later you delete the current one, the new website will lose its data.
If you want to delete the existing website, you will have to replace the MySQL links by a physical copy. JMS will not do that. You will have to do it manuall.

==========
