Transfer websites on Local Server to Live

Posted by virtualmax - 2010/04/29 13:32

Hi

Do anyone know how I should go about for a successful deployment of individual websites on my current localmachine to my live server as slavesites in a multisite environment...maybe users that have used Akeeba backup before?

Thank you

Maxwell

Use traditional Zip or tar + PHPMyAdmin export / import.
On windows platform, this is easy to zip and later unzip on your server.
On linux platform, you can tar -cvf (back) and tar -xvf (restore)
