installing a extension on children site.

Edwin,

this never happened to me before... but while i was trying to install jfbconnect in one of the children sites. i has this error.

Master site name: template slave site name: lasveags

- * It was not possible to copy the selected file.
- * JInstaller::install: Failed to copy file:

/home/localizit/public html/template/multisites/lasvegas/tmp/install 4bec21e837586/com ifbconnect/co mponent/index.html to /home/localizit/public html/template/components/com ifbconnect/index.html

instead of copying it to

/home/localizit/public html/template/multisites/lasvegas/components/com ifbconnect/index.html

it's copying it to: /home/localizit/public_html/template/components/com_ifbconnect/index.html

please advice.

i checked the tmp and other basic configuration came in my mind and all of it looks ok to me.

also, the same version of ifbconnect is also installed on the master site.

Re: installing a extension on salve site. Posted by edwin2win - 2010/05/14 01:30

This is probably due to a permission error. So check the owner of the file and perhaps also the chmod
