Disable all sites for a given user

Posted by simplweb - 2010/05/19 14:58

Hello

We want to have a site where a user can create up to 5 slave sites. We want to bill for this use, but don't want to use virtuemart.

How can we use other eshops?
If this is subscription based... how can we turn off access when a payment fails?
If they cancel, how can we automate deleting the sites?

Is there a way to disable all sites for a given user? For example if a user has created 5 sites, disable all of them?

Thanks
Dave

When you enable the "billable websites" functionality, all the website are created in "pending" status and are not live until something change the status in confirmed.
With our "Bridge plugin for VirtueMart" we have implemented all the stuff arround JMS to perform and mange the VM order status processing and also redirect to VM.

If you want to create a specific plugin for other system, you can do it and the API is documented in the User Manual.
