Images dont show up

Posted by jellydesign - 2010/06/03 09:55

Hi Guys. I need some help please.

I have setup a few extra sites with multi sites. The dns update was done last night, and this morning all the sites are working well, except non of the images show in slideshows and in articels

Any help will be appreciated.

All depends the URL and path that you have to the images.
Also this depends if you have shared or have specific images directory.

It is very difficult to reply you without detailled information and access to your website and HTTP Server configuration to check the URL and their equivalent location on the disk.
If the images are not displayed, this is because the location on the disk does not exists.
