Virtuemart Product Images

Posted by ride2esc - 2010/06/07 22:52

Howdy All.
I have a question..
Well, i already have 5 sites, with JMS & Virtuemart.
But the product images for al the 5 sites are stored in the same folder..
And now there are over 2500 Images and the same for thumbs.

My question is:

Is it posible to make some configuration or something, so each site have his own Virtuemart Product Images folder?
Like:

../components/com_virtuemart/shop_image/product/SITE-1
../components/com_virtuemart/shop_image/product/SITE-1/thumbs

../components/com_virtuemart/shop_image/product/SITE-2
../components/com_virtuemart/shop_image/product/SITE-2/thumbs

../components/com_virtuemart/shop_image/product/SITE-3
../components/com_virtuemart/shop_image/product/SITE-3/thumbs

And so on?

Thank you so much!

There is nothing public.
In fact VirtueMart save plenty of parameters into it "virtuemart.cfg.php" file that is manage by the "configuration" but the "shop_image" directory is not part of the user interface.

Perhaps you can experiment yourself to change manually the internal "virtuemart.cfg" file to modify all the entries relative to the "shop_image".
It is not guaranted that it will work because perhaps there are some other sources if they hardcoded the directory name but we think it should work.
