# Share an article with all sub-sites

Posted by axier - 2010/07/08 10:54

---

Hi,

I'm using "JMS Articles Sharing" component, and I'm able to share one article with one site. That's ok.

But, I was wondering if is posible to share an article with ALL my subsites in one step.
I've a lot of subsites, and now is tedious to share one-by-one all the articles.

Is there any method to do this?

Thanks in advance,

Axier

Oh, I realize by myself.

I can share an section instead an article, and all the new articles in that section will appear in all my subsites.

Sorry for my ignorance. ;-)
