

## Getting site\_id while in Virtuemart

Posted by themis94 - 2010/09/09 17:54

---

Hello,

I'm using last JMS with VirtueMart 1.1.5 (and Joomla 1.5.20)

I have 3 websites sharing the same database (master).

The categories have an attribute defining one or more web sites to which they belong.

How can I retrieve the "site\_id" in order to compare the attributes and assign if ok category X" to ShopA and/or shopB and/or shopC ?

Thank you in advance.

T.

Different solutions.

If this is in PHP, you can use the MULTISITES\_ID define value that contain the site\_id.

If this is in a description, articles, you can also use the plugin Multisites ID that you can download at [http://www.jms2win.com/free-download/doc\\_download/16-multisites-id-plugin](http://www.jms2win.com/free-download/doc_download/16-multisites-id-plugin)

Hello,

MULTISITES\_ID is perfect for what I need

Thank you, this was so easy finally :)

bye

T.
