JMS, multisite for joomla - Joomla Multiple Sites and user sharing Generated: 3 November, 2025, 15:07

Getting site_id while in Virtuemart Posted by themis94 - 2010/09/09 17:54
Hello,
I'm using last JMS with VirtueMart 1.1.5 (and Joomla 1.5.20)
I have 3 websites sharing the same database (master). The categories have an attribute defining one or more web sites to which they belong.
How can I retrieve the "site_id" in order to compare the attributes and assign if ok category X" to ShopA and/or shopB and/or shopC ?
Thank you in advance.
T.

Different solutions. If this is in PHP, you can use the MULTISITES_ID define value that contain the site_id.
If this is in a description, articles, you can also use the plugin Multisites ID that you can download at http://www.jms2win.com/free-download/doc_download/16-multisites-id-plugin

Hello,
MULTISITES_ID is perfect for what I need
Thank you, this was so easy finally:)
bye
