Article sharing.

Posted by mmyhre - 2010/09/15 15:21

I am using gavick components and moduls on my master site, and it is no problem to use gavick on slave sites.

Execpt sections and categorys do not work across sites. Anybody know how to make this work?.

Gavik components are not "multisites". They only display information of the current websites.

If you want to have multisites content modules or "articles sharing", see our
