slave site admin login

Posted by mismarketing - 2010/10/01 13:29

I have all my slave sites setup now, and i am wondering if there is a way to login to the administration area of the slaves using the following method:

mastersite.com/multisites/slave/administrator

this redirects me to the master admin area.

i need to update some things in the slaves before i change DNS to the new slave site setup.

is there a way I can login to the site if the domain isnt active on DNS yet?

I tested my setup its working fine with a spare domain. But i need to edit 15 slaves and would like to know if i can login easy then change DNS when im done editing.

Thanks

---

never mind. i figured it out.

just added:

mastersite.com/multisites/slave/administrator

to the domain list of the slave site works perfect. in case anyone else needs to know.
