How to create a new template for a slave?

Posted by javier011 - 2010/11/21 15:58

Hello,

guys, I am really lost in here, I am not a newbie though.
I think the documentation is kind of poor, I mean you have an extensive doc. but things are not well explained and/or not clear.

For example, I dont get on how to install a new template for the slave site.

where is the step by step or at least point to the right direction on this! ?

thanks

J

Try apply EXACTLY (Copy/past) the scenario that is presented in the tutorial video 0.d.
This show how to create a demo environment that is a summary of the different videos.

It is based on a cPanel.

The configuration of a JMS Template, depends on what you want to do.
If you want to replicate a website, you can get inspired from tutorial video 16 that show how to replicate a website and also share the users.

The tutorial are case study and you may have to adapt the value to your specific case.

We also have billable support that you perhaps could order to have a personal teaching session where we could try review and re-explain to you the things for your specific case and environment.
