Problem with Admin Site being redirected

Posted by jonhubbard - 2011/03/03 15:56

Hi, I have a problem where the admin site for a slave site appears to be being redirected to the master site.

ie, my site structure is

Master (www.mastersite.com)
Template Site (template.mastersite.com)
  |- Slave 1 (www.slave1.com)
  |- Slave 2 (www.slave2.com)
  |- Slave 3 (www.slave3.com)
  |- Slave 4 (www.slave4.com)

and the admin sites for the Master, Template Site, Slaves 1, 2 and 3 all work as expected but www.slave4.com/administrator brings up the admin site for www.mastersite.com (although the url shows correctly).

I have checked for any redirects but can't see anything obvious.

Any suggestions would be most welcome.

Either you did not correctly defined the slave site domain and in this case, when Jms Multi Sites does not find any domain that exactly match the one in the URL then it display the master

OR you have the "live site URL" defined in the "configuration.php" file that force to redirect the user to this URL.

Thanks, I had a typo in the domain name in the MultiSites setup. Changed that and all started working.

Brilliant app by the way - saving me hours in time.

Thanks again
