which video converter to get?!

Posted by Calviny - 2011/06/28 03:51

Right so I need a good, free video converter, preferably with a variety of input and output video types. FYI, I want to convert so that the files are playable on a PS3.

I've tried a lot but they all seem to be pretty bad. Once the video has converted (correctly, to be fair) they start off fine, but by the end of the show the video and audio and substantially out of sync.

Suggestions?

Sorry, I have no suggestion.
We are using commercial application to produce our videos.
