Presales Question: Scenario possible?

Posted by m3dw - 2011/07/06 20:43

Hi!

I´m not shure yet, if this is possible with JMS2Win:

A customer has 2 sites.

1st site should work as a master site for the other one.

The main goal is to share virtuemart products like:

Category A is only visible in the master site
Category B is only visible in the slave site.

The two sites are on completly different domains, no subdomains!

I know, that the sharing is the main task of JMS2Win, but I need a clear yes because there is no testing before buying.

Thanks!

If you want to have save VirtueMart products between website, you have to share the VirtueMart content.
In this case both website will have the same products, categories, orders, users, ...

You could create a specific VM category for each website and modify VM to just display specific categories.

So this will require specific update of VM to just display a specific category.

In standard, it is not possible to display a specific category.

So this will require specific update of VM to just display a specific category.

1.I could do this and improve it with the VM Template!
2.Can I then - with the abilities of JMS2Win - get through the order process and will stay on the correct domain until done?

3.Is it working for different domains or just for subdomains? I don´t get it! :blink:

Thank you!

_____

2) When you share VM, you share all its content and therefore also the orders.
So all the websites will be able to see the orders (as they are shared).

3) As explained in product detail section "parse URL", JMS is able to process domain, subdomain and also subdirectories. So all the cases are possible.

_____

:laugh:
Good News!

Thanks!
