Sharing websites and limiting users?

Posted by jjordan - 2011/11/28 19:16

Good Morning,

I have a couple of questions relating to my recent purchase of JMS Multisites.

1. Is it possible to share the list of slave sites produced by JMS Multisites by users of Joomla (possibly with the CommunityBuilder component installed?). Basically, a front end list of the "manage sites" window that is a live-updating list of all of the slave websites. Users could then just click on the websites to get to the website they wanted to go to.

2. Somewhat relating to question 1, is it possible to limit user access to slave sites when sharing users across slave sites? (Again, possibly with Community Builder installed). For example, let's say I have "Standard 1" installed, and then "Slave 1" and "Slave 2" installed off of that. In "Standard 1" I have User1 and User2. I want User1 to be able to access Slave 1 and Slave 2, but User2 to only access Slave 2. Is this possible?

Is this something that could be resolved with the Multisites Partial User Sharing Plugin?

Thank you!

---

1) If I understand correctly your question, you would like to have a list of all the slave site that are currently create from the front-end.
If this is the question, the answer is YES and this need to create a specific "layout" for JMS.
We have developed a layout that we called "List Anonymous" and that we hope publish before the end of this year.
You can already see it in action in the website www.mywebsite2win.com
It provides a kind of directory with the list of slave site with their title and description.

2) Yes this is something that can be solved with the "partial user sharing" version 1.1.x that we will publish soon. We are currently writing the documentation.

Hi Edwin,

Thank you for the quick response. I see the new release of partial user sharing looks EXACTLY like what I'm looking for... I'll be buying it right now! Fantastic!

Also, if you need help testing the "list anonymous" module, or anything having to do with that, let me know. We are looking for this kind of solution for Multisites :)

Thank you! Keep up the great work!

Hello Edwin.

Do you have an update on when you expect the "List Anonymous" plugin to be completed? (the directory listing of all slave sites)

Thank you!

The JMS 1.2.71 is now ready for the installation of the "layout".
We still have identified some bugs in our "list anonymous" under joomla 1.7.
So we will fix them before release the product soon. (Probably in 2 weeks).

Hello!

Is the List Anonymous plugin ready for use as of yet? One other question - will it be able to only display those slave sites that the user has permissions to? (such as permissions given through the Partial User Sharing plugin?)

Thank you!

The list anonymous is available and works on Joomla 1.5.

List with the JMS - list all site, you can filter the websites based on the "group".

Just the layout is different.
The layout anonymous can be ordered in the "eshop" section "layout for JMS".
