Pre sales question about VirtueMart

Posted by oorzaak - 2012/01/30 22:47

As a web developer I would like to offer VirtueMart webshop services in an efficient way. I was thinking of using MultiSite for creating new shops quickly and for one-stop updating the VM installations. I read some topics on this forum addressing VM but most of them were about sharing content. My goal is to keep all shops separated from each other. Every shop will have a different owner with their own products, payment details, VM template and so on.

Because I am not very familiar with MultiSite (yet) I thought I should ask if this is possible before I'll start working on it.

Kind regards,
Frits Jongbloets

Yes you can have separated VM in each website.

This depends on the VM version.
With VM 1.1.x, to have separated payment, you need our additional extension to make the payment method configuration specific for each slave site.
There is also a limitation concerning the shipment configuration.

With VM 2.0, it seems that those limitations are solved because the configuration are saved in the DB and no more in files on the disk.

Concerning the VM templates directory, it will be shared.
So all the VM templates are potentially available in all the websites.

In terms of product and catalog, ... they are independent as such information is store in the DB and that each slave site have their own DB or at least different table prefix.
