Need to create symbolic link for templates

Posted by boo2 - 2012/02/10 13:03

Hi guys,

When I go to create a new jms template then there is no option for creating Symbolic Link for the 'templates' directory.

I want all the slaves created via front-end with this template should link the 'templates' directory.

Any help is appreciated.

For the "/images" and the "/templates" directory, the action is "Special Copy".
When the Symbolic Link functionality is available this create a symbolic link.
Otherwise, this create a copy.

This is the reason why this is called "Special Copy" as this can be a link or a copy.
