# Unable to load Database Driver

Posted by superbee - 2012/02/10 23:22

---

When trying to add a new site, I get the following error:

500 - An error has occurred.
Unable to load Database Driver:

Return to Control Panel

I have no idea where to even start

Thanks.

I completely uninstalled the component, and reinstalled...

Joomla 2.5.1
JMS 1.2.75

Do you use a special driver other than MySQL and MySQLi ?

---

I am also getting the same error after upgrading to joomla 2.5. In the server > database settings it doesn't even give you an option to choose a database. The only option in the drop down is "none". This is on my master as well as all my slaves :(

==========

# Unable to load Database Driver - Only on Manage

Posted by concepth - 2012/02/15 11:18

---

Same Problem, but only on the general management of JMS

/index.php?option=com_multisites&task=manage : Unable to load Database Driver:

/index.php?option=com_multisites&task=templates : ok

/index.php?option=com_multisites&task=tools : ok
/index.php?option=com_multisites&task=checkpatches : ok
... : ok

_____

Concerning the "drop down" is "none", which version of JMS do you use ?
If you use JMS 1.2.74 or 1.2.75 we had a bug introduced in 1.2.74 that is fixed in 1.2.76.

Concerning the problem of the "unable to load the DB driver", the only answer that I know for that is that you have a wrong DB connection somewhere.
Perhaps this is in a slave site that has a wrong value.
In the manage site, to compute the "refresh icon", JMS connect on each slave site DB to count the tables. Perhaps you have a slave site with the wrong value.
You can try disable the "refresh icon" to see if you still have the problem.
You can do that in the "/adminsitrator/component/com_multisites/multisites.cfg.php" file that you can edit and remove the comment concerning the
define( 'MULTISITES_REFRESH_DISABLED', true);

## FIX: Unable to load Database Driver-Only on Manage

Posted by concepth - 2012/02/17 08:06

_____

Hi Edwin

The problem is FIX when the  "refresh icon" is disable.

You can do that in the "/adminsitrator/component/com_multisites/multisites.cfg.php" file that you can edit and remove the comment concerning the
define( 'MULTISITES_REFRESH_DISABLED', true);

I think that the problem come from the New Joomla 2.5 that have multiple news DB.

Or cause i create manualy Views in DB.

Thanks.

_____

This mean that you have 1 slave site in your list of all the website that has a wrong DB connection.

When the refresh icon is enable, JMS connect on each slave site to count the number of tables present in the slave site and compare it with the master.
So, you have one slave site that has a wrong DB connection.
