# Master and Slave are Not sharing users

Posted by waltervega - 2012/03/26 19:06

---

Hello Edwin,

I have created a fresh slave from a template where sharing was set up as follows:

- Share joomla users - selected
- Virtuemart - sharing all - selected

The problem is that whether you create a user in Master o Slave website it is not shared.

Where can the problem come from and what can I do to solve it?

Thanks in advance

Walter

Verify with the JMS Tool menu that the slave site effectivelly share the MySQL table (use the table tabs).

You need to have a link between the table.

If you don't have link but have physical table, this mean that you didn't created the slave site correctly as illustrated in the tutorial video 16.
http://www.jms2win.com/en/tutorial#jms12x-16

The key element is to define a JMS Template rule where you specify that you copy the "master webite" and that in the sharing tab that you select to share the users.
