Search and Replace error

Posted by adam - 2012/05/14 20:23

We are using the search and replace function to replace key words on a master site to all slave sites. Our searchreplace.SITEID.php file looks like this:

==========

Re: Search and Replace error

The reason was that in fact the search/replace was written in a single line and that everything was considered as a comment.
The file was not correctly transfered on the server and all the newlines were removed.
