Mail settings 'From Name' changes in Joomla config

Posted by TonyGee - 2012/05/28 08:32

Hi Edwin,

I've noticed that when I create a new slave site the 'From Name' in the Joomla config Mail Settings changes to the Joomla default config 'Site Name'.

For my setup I need the email settings 'From Name' to remain as is configured in the template and NOT change to the new Joomla Site Name.

Can you please confirm if JMS is triggering this change or is this something that is triggered in Joomla?

In either case do you have a suggestion to resolve this issue?

Thanks and regards. http://www.jms2win.com/images/fbfiles/images/config_mail_settings.jpg

When you replicate a website and provide a site title and new admin email address, they are used to build the "configuration.php" file.

The processing consists in using the "Template website" configuration.php file and replacing the from email with the "new admin" email value as well as the "from site name".
