# Problem with Aridatable and Artio fusion charts

Posted by helmuntdavid - 2012/06/18 23:21

---

I have got an article in the master website and I shared it using "Article sharing tool", this article use the next tags: "Jcomments", "aridatatables for Aridatable plugin" and "Chart id for to use Component ARTIO Fusion Chart".. After that I shared this article and his related components, plugins and modules, don´t show the information about aridatatables.

Can you help me please.

The "Article Sharing for JMS" is an extension called "com_multisitescontent" and it is probably normal that the "Artio" plugin is not designed to work with this extension.

It probably only work with the joomla "com_content" extension that is displaying the "local" articles.

Send us the "artio" extension in the attachement of an email to see if it "multisites artio" plugin could be developed ?
See "contact us" for the email address.
