# Article Sharing - Problems with special chracters

Posted by Mattz - 2012/09/20 15:24

---

We are using JMS2win Article-Sharing on our Joomla 2.5 Multisite-Installation.

Everything works fine until we are located on a page that is remoted from another slave site. Then all special characters in the menu items are displayed in a wrong encoding.

I don't see the relationship between the "article sharing" and the standard joomla "menu item".
The title that you enter in the menu item is not managed by the "article sharing".

Did you tested the same menu item "title" with another extension (ie. external link or something very basic).

Yes, sorry - in between i also found out, that it has nothing to do with the "Article Sharing" extensions, it only seems to be a coincidence that it only appeared at those items.
