Configuration Query

Posted by chriscundy - 2013/03/16 20:14

Hello,

Could you let me know by these screenshot whether the configuration looks correct?

I want to be using the same template from the master site on the slave sites as well as sharing content to the slave sites.

Thanks

If you want to share the Joomla /templates directory between website, you have to create a JMS Template rule that specify that.

Here you provide a screenshot of the "manage site" and it seems that you didn't defined any JMS template rule.

Under JMS 1.2.x, by default, the /templates directory is duplicated.
So, to change this default rule, create a JMS Template rule and setup how you want to create the directory - See the "folder and file" tabs.
