"Ignore when patter is" condition not working

Posted by ColumnTech - 2014/07/17 11:38

Hello Edwin,

I tried applying "Ignore when pattern is" condition with "&geoignore=1" by adding it in URL but it is not working.

is it because of any misconfiguration or because of htaccess or SH404SEF component??

Can you please help?

Thank you,
Aniket

Verify that you don't have a potential problem of cache that would display previous information.

When you set such kind of value in the URL, ensure that you have defined exactly the same value in the JMS slave site definition.
Otherwise, it will be ignore because it will not match.
