Creating and assigning templates

Posted by sniklewerks - 2009/08/11 08:18

_____

I have been able to create a slave site (multisites/site1) and installed Joomla.

Since I did not install demo content the default template appears with a menu item of only "Home".

I see no information or tutorial about how to create a template that is not for a "Front End" user. In the tutorial item #12 seems to be what I am looking for but there is no file associated with it.

Is there some sort of documentation for this or can you help.

Thanks in advance for your help :)

I did not realize I needed to login to the admin for "site1" and choose the template. :blink:
