Website root URL on logo

Posted by peterg - 2009/08/28 21:02

Hi,

We have installed JMS on www.methodworks.ca, and have successfully created a slave microsite/subdomain at onboard.methodworks.ca. It's a clone.

The logo in the top-left corner of the OnBoard site links to onboard.methodworks.ca. Is there a way for force it to link back to the main site of www.methodworks.ca?

Peter

The reason why you have the link on the logo that go to your local website is that you have put a So give a full url like http://www.methodworks.ca instead of the "/"

Perhaps this is coded like that in your template.

When I have a look in your html generated, this is the
