Slave site and database

Posted by Supernatural - 2009/10/12 21:00

Hello, i have created my slave site, in the new directory, with own database. Fronend of this website using the new (slave) database, but the administration is using the master database.

Please help, thank you.

Check that you provide the correct URL.
Perhaps you have forgottent to defined the slave site domain with WWW and without WWW.

So if you try to login with a wrong domain (not defined in JMS slave site), JMS display the master website.

So check the URL and in particular the domain your are using.
It must be spelled like you have defined it in your slaves site.
