Articel Sharing from mod_custom and RokTab

Posted by king.lui - 2009/11/28 16:18

Hi all.

With JMS Articel Sharing I can share articles and category-/section-layout but not content in mod_custom modules. Next problem: I am using RokTabs. RokTabs shows articles in tabs from sections and categories. Is there a way (a hack) to share these articles? Has anybody an idea?

Thanks and cheers...

I don't understand the question.
The article sharing works with "com_multisitescontent".
Which is the relationship with mod_custom that is module.

I don't see the relationship with RokTabs.
If you expect to use RokTabs with multisites "sections" and "categories" this will not works as you would have to create a "mutlsities rok tabs" to convert this module in a multisites versions.

Can you be more explicit.

Hi edwin2win.

Thanks for your feedback.

Yes, that it is. I will need a multisite rok tabs. In rok tabs i must select a category but I can't select categories from master site.

Cheers...

We have noticed that you would like to have such module.
For the moment, we have not time to develop such new product.
We have also other customer that require other modules.
We can just tell you that we noticed that you have requested it.

No we don't have developped such "Multisites RokTabs".
We note in our wished list that you would like to have such extension

What would be the cost for you to develop this Mutisite RokTab. We are willing to pay.

Send us the latest RokTab module to allow us review and see how it is implemented and what we should have to modify to create such "Multisites RokTabs".
The version that we have is 1.5 of june 2009. We don't know if this is the latest version.

We probably need 1 day to update and retest the "Multisites Roktabs" to add the "Site ID" parameter in the module and use it all the DB queries and DB connection.
The idea would be to read the DB from the "site ID" and not necessary from the current site.

_____

The latest version is 1.6. Attached is the latest RokTabs file. If you can't get to this file you can download it from the Rockettheme.com website directly in the Free Extensions area of the website. Let me know the cost is before you proceed.
