Menu links/internal links in articles not working

Posted by vedlos - 2009/12/05 19:11

Hi,

I have now got a slave site that is pulling through content from the master site. I have created new menus on the slave site which work. If there are any internal links on an article (either to content or menu) then I get a 404 error -OR- the url displays correctly but the home page is shown.

I appreciate your help.

This is the first "LEER" (read more link) on the front page
404 - Article #786 not found
http://www.educ.taichichuan.com.es/index.php?option=com_content&view=article&id=786:el-entrenamiento-del-tuishou-aplicado-a-la-competicion&catid=18:todos-los-articulos&Itemid=134

The URL's do look right....and are exactly the same but with the slave site prefix in front of it.

(The reverting to Home page with a different URL I have discovered is something to do with SEF URL's)

.....We also get error 500's with SEF url's enabled on the slave site, but with/without SEF URL's on the master site we continue to get 404 errors
