http://www.jms2win.com/images/fbfiles/files/Jpodium.zip

I am trying to install an extension in my master site, but get this when I try:

Within Joomla when I seach & upload the extension it reads it fine (see picture) but when I select the install button i get the below message.

Parse error: syntax error, unexpected T_STRING, expecting T_OLD_FUNCTION or T_FUNCTION or T_VAR or '}' in /homepages/16/d310455320/htdocs/Joomla/administrator/components/com_jpodium/helpers/jpodiumsql.php on line 26

Send us this extension in attachement of an email for review.

As we don't have this extension yet, we can not know what is located in this line 26

Please find attached the extention

If the file is not attached it can be downloaded here:

http://www.jpodium.de/index.php/download

Many Thanks...

Gary

I have done nothing different to what I did last night, but the installationworked fine today, I am only guessing that the extra 24hrs something has changed at my providers configuration. Perhaps the database must be left for 24hrs before components can be installed?

I also created a .htaccess to allow PHP5 perhaps this fixed the issue, it doesn't matter for now as the issue is now FIXED
Many Thanks

Gary
