Impossible to upgrade to 1.2.22

Posted by timelyglobal - 2010/03/02 17:28

Hi,

I tried to uninstall a previously installed version (1.219) and install latest one (1.2.22)but uninstall did not work and neither new install ! Please help !!

Which is the error message.
Perhaps that you have a "timeout" limit or that you can not upload files with size > 2MB.

If this is the case, check in this forum how to install JMS from a joomla installation directory

Can you give a link for that. I'm having the same problem, but I don't see anything in the forum that gives instructions on how to install from the server. Like, specifically, which directory are we suppose to put the install package in - the root /tmp? the master site /tmp?
