Need help, 1 template 8 replications diff prefixes

Posted by integrityds - 2010/04/23 17:31

My issue is trying to make 8 duplicate sites of one master site but have the content be exclusive (different and editable) to each duplicate site but the design will remain the same. We want the SQL structure to be one database file with all subsites having different table prefixes.

If you could help us do this contact me at 972 325 1850. I will even be willing to compensate your time via paypal if necessary. Please get back to me quick whoever can help! Thanks in advanced.

We have a billable support that you can order at
http://www.jms2win.com/download?page=shop.product_details&flypage=flypage.tpl&product_id=35&category_id=1

You have to create a JMS rule to replicate the website and depending if you want to have separated Joomla templates (themes), you will have to use the JMS template / folder "templates" action = "special copy" or "copy" or "special copy" + template folder = {deploy_dir}/templates.

See tutorial video 0.b
