Changing Site Status
Posted by DaveC - 2010/05/29 19:49

Hello

When changing the site status with updatestatus() can you call that from the onDeploy_OK function or is that to early in the process.

Also is it possible to set a site to 'Confirmed' in the onDeploy_OK function? (I am using billable and have plenty of quota)

Thanks
Dave

The "OnXXXX" function are only called from the front-end and are used by the plugin or to execute the speciific scripts from the front-end.

If you want to modify the status of a website into the onDeploy_OK, this is possible.
In general, it is recommended to wait that the payment is performed but this is possible.

Thanks for your reply.

If I wanted to set $order status manually what would the correct syntax be? eg:

I would like $order_status = $d; to be set to Confirmed would this translate to $order_status = 'Confirmed'; ?

Thanks
Dave

Yes you can put the word "Confirmed".
It is case sensitives and checked literally.

_____

Thanks again for your reply.

Is there any reason why I couldn't use site_id or owner_id?

MultisitesUtils::updateStatus('site_id', $site_id, $newStatus);
MultisitesUtils::updateStatus('owner_id', $owner_id, $newStatus);
