Error when installing new modules to slave sites

Posted by tchager - 2010/11/27 19:16

Edwin,

I get this error message at the top of the "execute" landing page any time I install a new module. It shows up after I install the module on the master site and then go to the JMS component and the "tools" tab. After I hit execute it shows this error message in a red bar at the top of the page yet still shows the module was installed successfully.

XML Parsing Error at 2171:49. Error 68: XML_ERR_NAME_REQUIRED

Any ideas what file is causing this?
It does not seem to affect the module installation, just looks annoying.

Thanks

Tony

Which is the version of Joomla are you using ? J1.5 or J1.6 ?
Which version of JMS Multisites ?
Which version of the patches definition ?

Just to be sure, do a "check for update" to get the latest patches definition.

Joomla ver is 1.5.21

JMS ver are one off
Version 1.2.42 (Latest available: 1.2.43)
Patches definition Version 1.2.48 (Latest available: 1.2.49

I will try the update, thanks,
