Multisite and JFusion Conflict

Posted by jsohler - 2011/01/28 10:41

Currently using this version below :
Multisites for Joomla! 1.5.x
Version 1.2.46 (Latest available: 1.2.46)
Patches definition Version 1.2.52 (Latest available: 1.2.52)

JFusion Component Version 1.5.4-000
JFusion Authentication Plugin Version 1.5.4-000
JFusion User Plugin Version 1.5.4-000
JFusion Activity Module Version 1.5.4-000
JFusion User Activity Module Version 1.5.4-000
JFusion Who's Online Module Version 1.5.4-000
JFusion Login Module Version 1.5.4-000
JFusion Search Plugin Version 1.5.4-000
JFusion Discussion Plugin Version 1.5.4-000

I tried to create a clone site on the front-end but i always getting this error below.

Warning: Invalid argument supplied for foreach() in /home/domain/public_html/administrator/components/com_jfusion/models/model.jfusion.php on line 379

Warning: Invalid argument supplied for foreach() in /home/domain/public_ht/plugins/user/jfusion.php on line 652

When i tried to disable "JFusion User Plugin" multisite works and had create a clone site. But "JFusion User Plugin" must be enabled for be able to JFusion to work. Any idea or solution about this conflict? It frustrate me a lot.

Your response is greatly appreciated.

Thanks,
Norman

Send me in the attachement of an email the All the JFusion that you are using to allow me retrying reproduce it.

Also give a detailled scenario that I can follow with potential screenshot that will show me how to reproduce the problem.

_____

I'll just post it here.

Multisite Version Currently using
Multisites for Joomla! 1.5.x
Version 1.2.46 (Latest available: 1.2.46)
Patches definition Version 1.2.52 (Latest available: 1.2.52)

JFusion version Currently using
http://i792.photobucket.com/albums/yy206/iostream01/3.jpg

On my Joomla Plugin Manager
Authentication - JFusion : enabled
Content - JFusion Discussion Bot : disabled
Search - JFusion : enabled
System - JFusion : enabled
User - JFusion : enabled

You can download JFusion with my same version that i'm using here :
http://www.jfusion.org/downloads/category/1-latest_release?download=17%3Ajfusion-1.5.4

This is my Multisite Website template Details.:
http://i792.photobucket.com/albums/yy206/iostream01/1.jpg

This is when i try to create a clone site on the front-end
http://i792.photobucket.com/albums/yy206/iostream01/2.jpg

When is press save. I get this error.
http://i792.photobucket.com/albums/yy206/iostream01/4.jpg

Status:
User Creation - ok
Database Creation- ok (SQL deployed correctly)
Clone files - some files are missing. files present(logs,tmp, configuration.php)
Creating a clone site - failure

When i tried to disabled JFusion User Plugin multisite works and created a clone site successfully, but when i try to enabled back JFusion User Plugin multisite would not work. So my conclusion is there is a conflict between Multisite and JFusion. Or maybe i'm wrong.. Any idea?

Your reponse is greatly appreciated.

Thanks,
Norman

I am not able to reproduce it.
Based on the error lines, it seems that JFusion has a problem to either connect on the DB of the website or does not have any "master" or "slave" defined in the JFusion configuration.

The line 379 correspond to a failure to get master in JFusion
$query = "SELECT name FROM #__jfusion WHERE master = 1 OR slave = 1";

Line 673 seems to be a failure when accessing the slave.

```
//update the user details in any JFusion slaves
$slaves = JFusionFunction::getPlugins();
foreach ($slaves as $slave) {
```

So perhaps this is a problem in the configuration of JFusion.

Personnaly, I didn't review it for a long time.
I hope that a customer will reply to your post.

Start to send us the JFusion in the attachement of an email.

See "contact us" for the email address.
